

## Zebra 2-190 Hi-Capacity Twin Filter System For Submersible Pumps

- Newly designed system makes maintenance easy!
- High-flow BIG pump situations.
- Custom tailored to your system to suit any pump size and configuration.
- Unit as shown was designed to house a Myers 5Hp - 20 GPM Submersible Pump.

The unique design utilizes 'heavy walled schedule 40 PVC pipe' making it the most durable system available. Its unique pump seal is water tight and easily accessible for any pump replacement and/or maintenance issues. It is quite simply, the best system on the market.

The system design allows for good cross flow over the pump motor, keeping it cool and running effectively with its upright position, while still allowing good exposure for its

backwashing/ filter cleaning capabilities. With a dual or greater pressure tank assembly we can cause a self back wash flushing of the filters immediately after every pump cycle, thus aiding in keeping the filters free and clear of debris and sediments so you enjoy years of satisfaction.

Also available (not shown) is our unique Cam Lock system. A simple, easy way of attaching and removing the filters for maintenance or replacement if required. Typically, one can expect several years of dependable service with these filters if utilizing its back-washing features.

*It's important to note that water conditions differ in areas so the turbidity of the water and/or weed factors may have an effect on the life and or performance of your filters.*

"Zebra Mussel Guard 170"

**Perfect for large volume applications.**  
Marinas, Campgrounds, Restaurants and larger Recreational Cottages.

*Custom designed applications and sizes available upon request.*

#### Description:

Float/Marker is a large boat-style bumper, weighted down with a mushroom-style anchor.

#### Install:

Suspend the **Zebra Pump Guard** Filter about half way between surface and the water bottom.

#### Ideal Location:

in an area void of boat & fishing traffic.

#### Maintenance:

Normal water flow and wave action will aide in keeping filter fairly clean. But occasional removal may be necessary to remove built up sediments and algae grunge!

#### Easy Clean:

This is easily accomplished by lifting the filter up and opening the quick attach coupler arms to release filter. The check valve keeps your pump from losing its prime! Clean the filter with a soft bristle brush or soak it in Zebra Filter Cleaner!
